August 24, 2023

Dear Valued Customer,

Since our company was founded in 1958, customers have continued to trust in the quality of Meyer Gage products. As a trusted brand, our focus remains on manufacturing precision gages that not only meet or exceed industry standards, but also enable our customers to consistently satisfy their quality needs.

Our last price increase occurred in October 2021 – nearly two years ago. Since then, the costs of labor and materials have increased significantly, requiring us to now adjust the prices of our products and services. Our revised prices will be effective September 1, 2023, and will be provided in an Excel workbook as soon as possible. Our new catalog will be made available online shortly thereafter.

Separately, in an effort to renew our focus on our core products, we have made the decision to discontinue some of our ancillary product offerings. To this end, the following products will be discontinued effective August 24, 2023:

- All Black OX-branded products
- Thread measuring wires
- Gear measuring wires

Additionally, we will no longer offer chrome plating for master setting discs, taperlock-, trilock-, and progressive-style gages, effective August 24, 2023. Going forward, chrome plating will be available for ring gages only.

Please note that all existing purchase orders for the aforementioned products will be fulfilled. While we will no longer manufacture thread or gear measuring wires, we will continue to offer ISO 17025-accredited calibration services for these products, regardless of the original manufacturer.

If you have any questions or comments, please do not hesitate to contact us via email at sales@meyergage.com or by calling us at 1-888-PIN-GAGE (1-888-746-4243).

We appreciate your business and look forward to working with you in the future.

Respectfully,

Meyer Gage Company
